**The Green Economics Institute is an independent, international, network, working on the core philosophies, methodologies, policies and literatures of change making in economics, the political economy and the economy.**

## **What we do**

The Green Economics Institute aims to explore new aspects of the political economy and of economics, theory, policy making and practise.

It brings together Economics Innovation with Green or Environmental Innovation. It works to create an atmosphere in Europe, and beyond, which fosters future thinking and solutions to today's problems especially in Economic Policy and works for a 'Renaissance in Economic Thinking'. It works across boundaries and so is especially keen on networking and linking its people and ideas together. Most of its projects work beyond the border of one country bringing together people from all walks of life.

**Academic Journal of the Conference is the International Journal of Green Economics**

All papers submitted by the proceedings for this conference will be considered for submission in the World first ever and Only Green Academic Journal, which we founded 10 years ago (vol. 10 issues 1-4, 2016).
