Austrian Greens!

Published by the Green Economics Institute

This book features green voices from around the world and explores the new world where far more people are older and constitute a significant force in the economy.

After a century of the **Cult of Youth** – things have changed and economically for the first time in a very long time, many older people are much better off than younger people. This is a sudden change which has happened over the last 12 years and we seek to explore the new realities of life for everyone, as well as the particular challenges, for society and for the individual, of life as an older person.

We would like to create an economy which is welcoming to all the new older people we have in society so that they can play their full part and reach their own full potential in a supportive environment and economy, enriching their lives and participating with a respectful society for their experience and wisdom. As greens we value life long learning and participation.
