

Our Aims

a) To Reform, Reshape and Repair mainstream and neo-classical economics to provide equal access for all, whilst providing academic rigour of the highest standards in terms of new thinking in philosophy, methodology and ontology for economics.

“Leading change by example” - Prof. Tony Lawson, Author and Professor of Econometrics at Cambridge University

b) To found an inclusive and progressive economics discipline, called “Green Economics” based equally on environmental and social justice and on diversity, comfortably including learning from natural science and other sources.

“The GEI have already been largely successful in their second aim” - Prof., USA

“You have achieved that already,” - Jacqueline Cremens, Sec. Gen. of the European Greens (Brussels 2011)

c) To create an Inclusive, Progressive economics discipline based equally on environmental and social justice and on diversity amongst all humanity, comfortably including learning from natural science and other sources and including everyone and everything on the planet. This way of living will be diverse and inclusive with access for all. It will include those with no voice, and those with no power, and those with disability of all kinds and all minorities. We must move beyond pursuing the greatest happiness of the greatest number and include everyone equally. This we describe as “Progressive and Inclusive Economics.” **We have been working to create a team as diverse as possible and walking the talk, practising what we preach. We are extending our programme to expressly offer places in our teams at the highest level, to people with disabilities which are either of personality, physical and mental nature.**

d) To create an economics which in which long term survivability of everyone and everything on the planet are regarded as equally important to short term considerations of profit, greed and growth.

e) To make economics efficient, and relevant to the concerns of the 21st century, removing the short term growthist and greed and wealth creation imperative and replacing it with more holistic values.

“An inclusive and holistic discipline of Green Economics is music to my ears.” - Prince Charles, Prince of Wales, on our academic journal, the *International Journal of Green Economics*.

f) To make economics practise and theory accessible for everyone, (including women throughout the world) removing its exclusive priesthood. Everyone and everything on earth has an economic impact, economic rights and economic responsibilities.

In 2011 Miriam Kennet was named as one of 100 most powerful women in the world who create change by poverty charity One World Action and awarded by Jon Snow of the BBC.

g) To change peoples, (especially economists) perception of the natural world and its beings, and its systems so they see themselves, and their economy as part of it. **We launched our model of the economy in the House of Commons in 2011 where it was very well received.**

h) To influence governments and politicians to adopt the above into policy making. **The Swedish and Ghanian Environment Ministers have used our books to inform their policy making in 2012. The RIO +20 Summit Leader used our books (Handbook of Green Economics) to inform the outcome of the conference. The United Nations has badged our women’s Unequal Pay and Poverty book as its own! We have spoken in the UK Bank of England and the board of the European Central Bank strategy discussions.**
